

Beacon Green

“Wow what a fun project managing an eco club for our school. We have saved money as well as helping to save the environment.”

Student, Dundale School

Beacon Green is a highly inspiring programme where participants are asked to design, manage and evaluate an environmental project within their own environment.

- Working in teams, participants conduct an environmental audit in order to identify a suitable eco-project focusing on; transport, energy saving, sustainability, green energy and recycle, reduce and reuse
- The project management process will include checking the viability of their chosen project, planning, implementation and calculating the costs and benefits in terms of both money and for environment
- Ongoing support and help with identifying funding can be provided, for more ambitious projects, through follow up visits

www.wenta.co.uk

Beacon Green can be delivered in a variety of formats and to various age groups. The programme meets the requirements of ESDGC and credits can be gained towards Foundation Learning qualifications and is fully mapped to the curriculum.
